

Building bridges from drugs to patients

Our Mission:

We develop and produce key technologies for patient focused liquid drug delivery devices

As a center of competence for micro pump technologies, we collaborate with innovative pharmaceutical and biotech companies-

Our History:

The idea to develop a micro pump

The founders of the company, two scientists, discussed pump technologies and came up with the idea to develop a micro pump based on a rotary piston pump technology. The pump consisted of only a few parts but provided high accuracy. They had the goal to improve patients lives with a better pump technology for insulin; and later on also for other drugs. A very small group of engineers started in 2004 when Sensile Medical was founded.

Our Aim:

A better life for patients and environmentally friendly solutions

Our devices fulfill the highest standards and result in safe and reliable solutions for the patients. At the same time, only very cost efficient device solutions will lead to therapies which are widely adopted in key markets. Therefore, we have developed a reusable /disposable device solution to minimize waste and optimize therapy cost.

Prix SVC «Innovation» 2017

Sensile Medical is also very proud to have won the price «Innovation».

Winner InnoPrix SoBa 2017

The foundation's aim « Stiftung der Baloise Bank SoBa zur Förderung der solothurnischen Wirtschaft» is setting a long lasting impact in the local economy.

The «InnoPrix SoBa» Award is given once a year and comes with a monetary prize of CHF 25'000 to support innovative product and service ideas in the Canton of Solothurn.

Sensile Medical's employees were key to the success. We are very proud and continue working on innovative ideas building bridges from drugs to patients.

Building bridges from drugs to patients

Swiss Technology Award «Innovation Leader» 2015

Sensile Medical is also very proud to have won the Swiss Technology Award in the category of «Innovation Leader» in 2015.

This prize is the most important award for innovation and technology transfer in Switzerland. The Swiss Technology Award has been presented for the 27th time at the Swiss Innovation Forum 2015 on the 19th of November, 2015 in Basel.

Our Team:

In order to support the ambitious plans for growth, Sensile is seeking highly qualified employees

Sensile Medical currently employs people, mainly in the areas of engineering, electronics, software development and micro system technology.

The in-house development expertise ranges from engineering to product management and design. In collaboration with experienced manufacturing partners, we ensure that all requirements of our customers are met.

We are member: SWISS MEDTECH

Our Certificates:

EN ISO 13485:2012 and IQNet
